8 | HTML and HTML5 Cheat Sheet by www.SnippetNuggets.com

12. formtarget="_blank|_self|_parent|_top|framename"
 Specifies where to display the response that is received after submitting the form(only for type="submit" and type="image")
13. height="x in pixels"
 Specifies height of an <input> element(only for type="image"). For other types of <input> element, modifying height through CSS is preferred.
14. list="datalist_id"
 Specifies to <datalist> element that contains pre-defined options for an <input> element.
15. max="number|data"
 Specifies the maximum value for an <input> element.
16. maxlength="number"
 Specifies the maximum number of characters allowed in <input> element.
17. min=="number|data"
 Specifies a minimum value for an <input> element.
18. multiple
 Specifies that a user can enter more than one value in an <input> element.
19. name="text"
 Specifies the name of an <input> element.
20. pattern="<regexp>"
 Specifies a regular expression that an <input> element's value is checked against before accepting input as correct.
21. placeholder="text"
 Specifies a short hint that describes the expected value of an <input> element.
22. readonly
 Specifies a short hint that describes the expected value of an <input> element.
23. required
 Specifies that an input field must be filled before submitting the form. Such elements are shown with an asterisk symbol before it.
24. size="number"
 Specifies the width, in characters, of an <input> element.
25. src="URL"
 Specifies the URL of the image to use as a submit button(only for type="image").
26. step="number"
 Specifies the legal number intervals for an input field.
27. type="<type of input>"
 Following are the values an type attribute can take
- | | |
|--------------------|------------|
| type values | |
| • button | • password |
| • checkbox | • radio |
| • color | • range |
| • data | • reset |
| • datetime-local | • search |
| • email | • submit |
| • file | • tel |
| • hidden | • text |
| • image | • time |
| • month | • url |
| • number | • week |
28. value="text"
 Specifies the value of an <input> element.
29. width="pixels"
 Specifies width of an <input> element(only for type="image").

Select Tag

<select> ... </select>

Used to create drop-down list with several options to select. The <option> tags inside <select> element creates list of options.

<option> ... </option>

Used to create list of options for <select> element.

Nuggets:

- The <select> element is a form control and can be used in a form to collect user input.
- <select> and <option> elements also supports both **global** and **event** attribute.
- <option> element(s) go inside <select> or <datalist> element
- The <option> tag can be used without any attributes, but you usually need the value

HTML 5 TAG REFERENCE	
<comment>	Define a comment
<!DOCTYPE>	Defines the document type
<!-->	Start, breaking, ending, target, type
cdata	Defines an XML cdata
<!-->	Used for comments
address	Defines an address element
caption	Used to define an embedded object
area	Defines an area inside map, alt, coords, href, hreflang, media, rel, shape, type
<article>	Defines an article
<aside>	Defines content aside from the main content
<audio>	Defines sound content

HTML TAG LIST

Prepared by Ifthekhar Mahmud

<head> Tag	: এই ট্যাগে ডকুমেন্টের ইনফর্মেশন রাখা হয়।
<title> Tag	: ওয়েবসাইট এর টাইটলে দেওয়ার জন্য এই ট্যাগ ব্যবহার হয়।
Heading Tag h1-h6	: হেডলাইন লিখার জন্য।
Paragraph tag p	: পেরাপ্রাপ্ত লিখার জন্য।
Line Break br	: লাইন ভাস্তার জন্য ব্যবহার করা হয়।
<hr> Tag	: রূলারের মত হরিজেন্টাল দাগ দেওয়ার জন্য।
 Tag	: লেখা বোল্ড করার জন্য।
<i> Tag	: লিখাকে ইটালিক করার জন্য।
<pre> Tag	: ডাটা ফরম্যাটিং আকারে দেখানোর জন্য।
 Tag	: লিখা বোল্ড করার জন্য।
<sub> Tag	: লিখা নিম্নে দেখানোর জন্য।
<sup> Tag	: লিখা উপরে দেখানোর জন্য।
<u> Tag	: লিখার নিচে আন্ডারলাইন করার জন্য।
<bdo> Tag	: লিখা উল্টা দিক থেকে শুরু করার জন্য।
<form> Tag	: ফর্ম তৈরি করার জন্য এই ট্যাগ ব্যবহার করা হয়।
<input> tag	: ডাটা ইনপুট দেওয়ার জন্য ব্যবহার করা হয়। এই ট্যাগের একাধিক প্রকার আছে।
<textarea> Tag	: একাধিক লাইন ইনপুট নেওয়ার জন্য এই ট্যাগ ব্যবহার করা হয়।
<label> Tag	: ইনপুটের লেভেল দেওয়ার জন্য এই ট্যাগ ব্যবহার করা হয়।

List of all html5 tags and attributes pdf

HTML5 Tag Inserts style information (commonly CSS) into the head of a document. HTML5 Tag Specifies a definition for a term in a definition list. HTML5 Tag Produces a single line break. You can learn about anchor tag from Complete Tutorial on Anchor Tag. It is used to define the beginning and end of a hypertext link. Specifies attributes for multiple columns in a table. . HTML5 Tag Represents text highlighted for reference purposes. The type attribute specifies the Internet media type (formerly known as MIME type) of the linked document. The area tag is only child element of map tag. target link nohref area profile head version html name img scheme meta archive object classid object codetype object declare object standby object valuetype param type param axis td and t abbr td and t scope td align caption, iframe, img, input, object, legend, table, hr, div, h1, h2, h3, h4, h5, h6, p, col, colgroup, tbody, td, tfoot, th, thead and tr. origin Only send the origin of the document as the referrer. The tag is always a hyperlink, but if it has no href attribute, it is only a placeholder for a hyperlink. See Referrer-Policy for possible values and their effects as follows : Referrer-Policy: no-referrer Referrer-Policy: no-referrer-when-downgrade Referrer-Policy: origin Referrer-Policy: origin-when-cross-origin Referrer-Policy: same-origin Referrer-Policy: strict-origin Referrer-Policy: strict-origin-when-cross-origin Referrer-Policy: unsafe-url The Referer header will be omitted entirely. Which HTML5 tag embed a webpage inside a webpage ? marginheight iframe marginwidth iframe noshade hr nowrap td and th rules table scrolling iframe size hr type li, ol and ul. HTML5 Tag Displays text in a bold style. Hints at the linked URL's format with a MIME type. HTML5 Tag Groups a set of rows summarizing the columns of the table. Defines big text Defines centered text Defines a directory list Defines text font, size, and color Defines a frame Defines a set of frames Defines a single-line input field Defines a noframe section Defines strikethrough text Defines underlined text Deprecated Attributes HTML5 has none of the presentational attributes that were in HTML4 as their functions are better handled by CSS. Nested HTML Elements A simple HTML element is made of an opening tag , a closing tag , and some content (text , images , etc. Defines an HTML form for user input. If the download attribute value is omitted, the original filename is used. HTML5 Tag The HTML area tag defines a specific area within an image map. Embeds external application , typically multimedia content like audio or video into an HTML document. HTML5 a () or anchor tag or element example on internal link. This is the ID reference heading This is the id reference Link with element id as reference followed by #. Anchor tag must have title attribute. no-referrer-when-downgrade (default) This is the default behaviour if no policy is specified, or if the provided value is invalid. An anchor tag is an HTML tag. _self Opens the linked document in the same frame as it was clicked (this is default). HTML5 Tag Defines the root of an HTML document. HTML5 Tag Defines the title of a table. Page 2 Last updated on June 30th, 2021 The HTML5 a () or anchor tag or element creates a hyperlink to web pages, files, email addresses, locations in the same page, or anything else a URL can address. What is an Empty Element in HTML ? An element is defined by HTML tags. It can be used together with h1 to h6 tags to indicate the document structure. HTML5 Tag Defines alternative content to display when the browser doesn't support scripting. (If Content-Disposition: inline, Firefox prefers the header while Chrome prefers download.) Value : URL Specifies the location of the destination document or web resource (such as an image, PDF, or other media file). One of the most common issues for beginners is understanding the difference between HTML elements and tags. Page 3 57 Lectures 5.5 hours DigiFisk (Programming Is Fun) Page 4 57 Lectures 5.5 hours DigiFisk (Programming Is Fun) Last updated on September 3rd, 2021 This HTML5 tags or HTML5 elements tutorial contains a complete list of all standard HTML5 tags belonging to the latest HTML5 and HTML specifications. HTML5 Tag Specifies emphasized text. The area tags defined in map tag for image tag. There are 3 benefits of anchor tag. No Scrolling : The biggest benefit to the anchor tag is not forcing website visitors to scroll down tons of information to find a particular section. HTML5 Tag Defines a client-side image-map. frame table frameborder iframe hspace img and object. Following are all the attributes or properties of HTML5 anchor tag. Like br, img is an empty element with attributes but no content or closing tag. This tag represents a section of the document intended for navigation. This attribute should be used only if the href attribute is present. All the HTML5 tag list is shown below in this HTML5 tags tutorial. HTML5 Tag Defines a long quotation. Specifies a definition. The HTML elements represent the document's structure , while tags are simply a part of the HTML syntax. Examples of non-semantic elements: and , Tells nothing about their contents. Without a value, the browser will suggest a filename/extension, generated from various sources: The Content-Disposition HTTP header The final segment in the URL path The media type (from the Content-Type header, the start of a data: URL, or Blob.type for a blob: URL) Defining a value suggests it as the filename. HTML5 Tag Specifies a block of deleted text. HTML5 Semantic Elements defines their contents. HTML tags belonging to the latest HTML5 specifications. HTML5 Tag Defines the document's body.) between the two. clear br compact dl, menu, ol and ul. HTML5 Tag Represents the header of a document or a section. HTML5 Tag Groups a set of rows that describes the column labels of a table. The type attribute is only used if the href attribute is set. HTML5 Tag The iframe tag specifies an inline frame. Where to display the linked URL, as the name for a browsing context a tab, window, or . The element can be placed as the first or as the last child of a element. rel attribute values ValueDescription alternate Provides a link to an alternate representation of the document (i.e. print page, translated or mirror) author Provides a link to the author of the document bookmark Permanent URL used for bookmarking external Indicates that the referenced document is not part of the same site as the current document help Provides a link to a help document license Provides a link to licensing information for the document next Provides a link to the next document in the seriesnofollow Links to an unendorsed document, like a paid link. HTML5 Tag Displays text in a smaller size. media attribute Value : media query Specifies the media for which the linked resource is designed. Specifies the URL to be notified if the user follows the hyperlink. The iframe tag is used to embed another document within the current HTML document. In other words a clickable area on image which is defined with map tag. An anchor tag is an HTML tag. HTML5 Tags to Defines HTML headings. valign col, colgroup, tbody, td, tfoot, th, thead and tr width hr, table, td, th, col, colgroup and pre. File systems may forbid other characters in filenames, so browsers will adjust the suggested name if necessary. HTML5 Tag Defines a term (an item) in a definition list. HTML5 Tag Specifies text as sample output from a computer program. HTML5 Tag Indicates a citation or reference to another source. The empty fragment (href="#") to link to the top of the current page click on this anchor element HTML5 a () or anchor tag or element example on external link. Defines a section of a document , such as header , footer etc. Examples of semantic elements: , , and . This attribute may only be used when href is specified. HTML5 Tag Represents the completion progress of a task. A standard element in HTML has content enclosed within opening and closing tags , but some are empty (void). HTML5 Tag Defines an input control. Simple example on html5 a () or anchor tag or element. Nesting occurs in all HTML pages , it provides better functionality and a neater look. HTML5 Tag Represents text that is isolated from its surrounding for the purposes of bidirectional text formatting. Links are not restricted to HTTP-based URLs, they can use any URL scheme supported by browsers. Users click on the anchor text to reach the link target. strict-origin Only send the origin of the document as the referrer when the protocol security level stays the same (HTTPS→HTTPS), but don't send it to a less secure destination (HTTPS→HTTP). charoff col, colgroup, tbody, td, tfoot, th, thead and tr. --> HTML5 a () or anchor tag or element example on external link.
